Starbuntu - Quick Start Guide

Change Design:

- Background: App Menu / Graphics / Background or Ctrl+Super+w
- Themes: (windows, icons): App Menu / Preferences / Appearance

App Menu Management:

- Left click on the first panel button, navigate to the entry, click on the cursor bar under 'Parameters', enter parameters, 'OK'
- Change menu entry: Ctrl+Super+d, enter keyword, select desktop file, edit
- Delete menu entry: Ctrl+Super+d, enter keyword, select desktop file, 'NoDisplay=true' in the last field
- Add menu entry: Ctrl+Super+d, no keyword, 'OK', desktop file name, 'OK', edit file
- Change structure: right click on the first bar button, enter password, follow program instructions
- After all changes, left click on the second bar button, then click on the Starbuntu logo, otherwise the app menu will only be updated in the next session. This also applies to package changes.

Panel Management:

- Call assignment of the bar buttons: Mouse pointer on button, then: call left | (middle |) right assignment with left | (middle |) right mouse button
- Change assignment: Left click on the field before the system tray, choose button, 'OK', edit, 'OK'

Find Menu Entry:

- Middle click on the corresponding menu button (App Menu, Memo Menu, File and Url exposition), then keyword in the text input box, 'OK'

Change System Tray:

- Add a program temporarily: Right click on the field before the system tray
- Retain added program: Right-click on symbol, then click on '→ Permanent'
- Remove permanence: Right click on icon, then click on 'Quit permanent'
- Remove the program temporarily: right-click on the symbol, then click on 'Quit'
- Performing the last two steps will remove the program definitely.

Trash Bin Management:

- Delete object(s) reversibly: right click, then click on '_ To Trash'
- Restore object(s): right click, then click on '_ Restore From Trash'
- Empty Trash: Right-click on an object, then click on 'Empty Trash Bin'

Open a file with its application:

- In the file manager: click on the file/s or mark it/them and Super+Return
- Command input: in the terminal 'all-open file path' (or 'a file path' for short), in the command input box the file path is sufficient

Open a file with a different application:

- In the file manager: select file, F11, enter 'Application "$@"' in the lower text field, Return
- Command input: in the terminal/command input box 'application file path'

Run desktop file with parameters:

- In the file manager: Mark the file, F11, enter 'x "$@" parameters' in the lower text field, Return
- Command input: in the terminal / in the command input box 'exec-desktop filename parameters' (or 'x filename parameters' for short)
- In the App Menu: see above.

Change User:

- If a white window appears briefly after starting a program, press Super and enter your password.
- Open object as another user: right click, click on '→ Other User', enter your own password (for root rights) or the password of the other user and in this case select this user under 'User' (for rights of this user)
- Command input: 'gsu command' (see previous point for details)

Edit Memo Menu, File Exposition, Url Exposition:

- Memo Menu: Mark the text passage to be added, Ctrl+Super+n, set title, select category, 'OK'
  - Edit memo: after double click or 'Edit'
  - Delete memo: 'Edit', then 'Del'
  - Add memo: 'Edit', then 'New', fill label and detail, 'OK'
- File Exposition: Right click on the file to be exposed, Open with..., 'Expose File', then set icon, application and category
  - Edit File Exp.: 'Edit', then edit fields, 'OK'
  - Delete File Exp.: 'Edit', then 'Del'
  - Add File Exp.: 'Edit', then 'New', fill label and detail, 'OK'
- Url Exposition: In the web browser Ctrl+Super+u, 'Yes', then set icon, application, category and title
  Edit, delete, add url: see File Exposition
